

ProjectHub User Manual

Version 1.0

July 2026

Prepared by: Nabin Shrestha

Independent sample project created to demonstrate technical writing skills. ProjectHub is a fictional project management platform, not affiliated with any existing product.

Introduction

About ProjectHub

ProjectHub is a cloud-based project management platform that brings project creation, task assignment, deadline tracking, and reporting into a single workspace. Hence, teams can plan work, delegate responsibilities, and monitor progress without switching between separate tools.

Key Features

- Project creation and organization, wherein each project functions as a dedicated workspace.
- Task assignment and tracking, alongside status updates visible to the whole team.
- Deadline and timeline management at both the project and task level.
- Team member and permission management, with role-based access control.
- Reporting and data export, including PDF and Excel formats.
- A customizable Dashboard, including a Dark Mode appearance option.

Intended Audience

This manual is intended for team members, project leads, and administrators who use ProjectHub to manage projects and collaborate with their teams. Further, no prior experience with project management software is assumed.

Purpose and Scope

Purpose

This manual provides instructions for using ProjectHub's core features, wherein each section follows the same structure: Purpose, Prerequisites, Step-by-Step Instructions, Expected Result, and Troubleshooting. Hence, sections can be read independently or in sequence, depending on what a user needs at a given time.

Scope

Sections are organized to follow the natural lifecycle of using the software, starting with project creation and moving through daily-use workflows such as task assignment, deadlines, and reporting. This manual covers the core workflows outlined in the Table of Contents.

Advanced or administrative functions, such as billing, workspace-level settings, or third-party integrations, are outside the scope of this manual. Further, a consolidated Note on Assumptions and a Glossary are included at the end of this manual, covering areas wherein the platform's exact behavior was not specified and had to be inferred from standard practice in comparable project management tools.

Revision History

Version	Date	Description	Author
1.0	July 2026	Initial release, covering project creation, task assignment, deadlines, member management, reporting, dashboard, and account settings.	N. Shrestha

System Requirements

Supported Browsers

- Google Chrome (latest two versions)
- Mozilla Firefox (latest two versions)
- Microsoft Edge (latest two versions)
- Safari (latest two versions, macOS only)

Connectivity

A stable internet connection is required, as ProjectHub is a cloud-based application with no offline mode. Hence, actions such as creating projects, assigning tasks, and generating reports all require an active connection.

Account Access

A registered ProjectHub account is required to log in. Further, certain actions described in this manual, such as creating projects or managing members, require specific permission levels, as noted in the Prerequisites of each section.

1. Creating a New Project

Purpose

This section explains how to create a new project in ProjectHub. Creating a project is typically the first step before task assignment, setting deadlines, or generating reports. Hence, new project creation is meant to be quick and necessitates only a few required fields to get started.

Prerequisites

- A ProjectHub account with login access.
- Permission level of Project Creator or Admin. Users with view-only access cannot create projects.
- A modern web browser (Chrome, Firefox, Edge, or Safari).
- A project name ready. A short description and timeline are optional but recommended.

Step-by-Step Instructions

1. Log in to ProjectHub using your registered email and password.
2. From the left sidebar, click Projects.

[Screenshot: Projects tab in left sidebar]

3. Click New Project, located in the top-right corner of the screen.

[Screenshot: New Project button]

4. Enter a project name in the Project Name field. This field is required and cannot be left blank.
5. Add a short description in the Description field, if needed. This is optional and can be edited later.
6. Set the project timeline. Click the Start Date field to open the calendar picker, and select a date. Repeat for the Due Date field. Dates can be changed later from the project settings if needed.
7. Click Create Project, located at the bottom of the form, to finish.

[Screenshot: Create Project form with all fields filled in]

Expected Result

After clicking Create Project, the new project should open automatically, showing an empty project workspace with no tasks yet. The project name should also now appear in the main Projects list. If the result is not as expected, it indicates an error may have occurred. Common issues and their fixes are listed in the Troubleshooting section below.

Troubleshooting

Issue: New Project button is not visible or is greyed out.

Cause: Account does not have Project Creator or Admin permission.

Fix: Contact your workspace Admin to request access.

Issue: Error message saying project name already exists.

Cause: A project with the same name is already present in the workspace.

Fix: Use a different, more specific project name.

Issue: Create Project button does not respond when clicked.

Cause: A required field (Project Name) may be empty, or there is a temporary network issue.

Fix: Check that the Project Name field is filled in. If it is, refresh the page and try again.

Issue: Calendar picker does not open when clicking Start Date or Due Date.

Cause: Browser compatibility issue.

Fix: Refresh the page. If the issue continues, try a different supported browser.

Issue: Project was created but does not appear in the Projects list.

Cause: Page may not have refreshed properly after creation.

Fix: Refresh the Projects page. If the project still does not appear, contact support.

2. Assigning Tasks

Purpose

This section explains how to assign a task to a team member within a project. Assigning tasks is typically the next step after a project has been created, wherein work is broken down and delegated to specific team members.

Prerequisites

- An existing project in ProjectHub.
- At least one team member added to the project. Tasks cannot be assigned to someone who has not been added to the project as a member.
- Permission level of Project Creator, Admin, or Editor.

Step-by-Step Instructions

8. Open the project in which you want to create a task.
9. Click the Tasks tab, located in the project navigation bar.

[Screenshot: Tasks tab within project navigation]

10. Click New Task, located in the top-right corner of the Tasks view.
11. Enter a task name in the Task Name field. This field is required.
12. From the Assignee dropdown, select the team member responsible for the task.
13. Set a due date for the task, if needed. This is optional and can be added later.
14. Click Create Task to finish.

[Screenshot: New Task form with assignee and due date fields filled in]

Expected Result

After clicking Create Task, the task should appear in the project's task list under the appropriate status column. Further, the assigned team member should receive a notification alerting them of the new task.

Troubleshooting

Issue: Assignee does not appear in the dropdown.

Cause: The intended assignee has not yet been added as a member of the project.

Fix: Add the person as a project member first, from Project Settings > Members, then try assigning the task again.

Issue: Create Task button does not respond when clicked.

Cause: The Task Name field may be empty, or there is a temporary network issue.

Fix: Check that the Task Name field is filled in. If it is, refresh the page and try again.

Issue: Assignee does not receive a notification.

Cause: Notification delivery delay, or the assignee's notification settings may be disabled.

Fix: Wait a few minutes, as delivery can occasionally be delayed. If the notification still does not arrive, ask the assignee to check their notification settings in Account Settings.

3. Setting Deadlines

Purpose

This section explains how to set or update due dates, both at the project level and at the task level. Deadlines help teams track progress and are reflected on the Dashboard and in Reports.

Prerequisites

- An existing project or task with a due date to be set or changed.
- Permission level of Project Creator, Admin, or Editor.

Step-by-Step Instructions

15. To set a project-level deadline, open the project and click Settings in the left sidebar.
16. Click the Due Date field, which opens the calendar picker.
17. Select the desired date, then click Save.
18. To set a task-level deadline, open the relevant task from the Tasks tab.
19. Click the Due Date field within the task detail panel, and select a date from the calendar picker.
20. Changes to task due dates are saved automatically. Hence, no separate Save step is required at the task level.

Expected Result

The updated deadline should appear immediately on the project or task, and should also be reflected on the Dashboard's upcoming deadlines list, as well as in any reports generated afterward.

Troubleshooting

Issue: Calendar picker does not open when clicking the Due Date field.

Cause: Browser compatibility issue.

Fix: Refresh the page. If the issue continues, try a different supported browser.

Issue: Updated due date does not appear on the Dashboard.

Cause: Dashboard data may not have refreshed after the change.

Fix: Refresh the Dashboard page. If the deadline still does not appear, allow a few minutes for the sync to complete.

Issue: Task marked overdue despite the due date being updated.

Cause: The overdue flag may not update until the next scheduled sync.

Fix: Refresh the Tasks view. If the task is still incorrectly flagged after a few minutes, contact support.

4. Managing Project Members and Permissions

Purpose

This section explains how to add or remove project members, and how to assign roles that control what each member can do within a project.

Prerequisites

- Permission level of Project Creator or Admin. Editors and view-only members cannot manage other members.
- The email address of the person to be added, if they are not already part of the workspace.

Step-by-Step Instructions

21. Open the project and click Settings in the left sidebar.
22. Click Members, located within the Settings menu.

[Screenshot: Members list within Project Settings]

23. Click Add Member, and enter the email address of the person to be added.
24. From the Role dropdown, assign a role: Admin, Editor, or View-only.
25. Click Add to finish. The new member should appear in the Members list.
26. To change an existing member's role, click the role next to their name and select a new one from the dropdown.
27. To remove a member, click the three-dot menu next to their name and select Remove from Project.

Expected Result

Newly added members should appear in the Members list with the assigned role, and should gain access matching that role's permissions. Removed members should immediately lose access to the project.

Troubleshooting

Issue: Cannot remove a member from the project.

Cause: The member being removed is the only remaining Admin. ProjectHub requires at least one Admin per project.

Fix: Assign Admin role to another member first, then remove the original member.

Issue: Invited member does not receive an invitation email.

Cause: Email delivery delay, or an incorrect email address was entered.

Fix: Double-check the email address entered. If it is correct, wait a few minutes, then resend the invitation from the Members list.

Issue: Role change does not take effect.

Cause: The affected member may need to refresh their session for the new role to apply.

Fix: Ask the member to log out and log back in. If the issue continues, contact support.

5. Generating Reports

Purpose

This section explains how to generate a summary report of project progress and task status. Reports are useful for reviewing progress over a given period or sharing status updates with stakeholders.

Prerequisites

- An existing project with at least one task, so that the report contains meaningful data.
- Permission level of Project Creator, Admin, or Editor. View-only members can view reports but not generate new ones.

Step-by-Step Instructions

28. Open the project and click Reports in the project navigation bar.
29. Click Generate Report, located in the top-right corner of the Reports view.
30. Select a report type, such as Task Summary or Progress Overview, from the dropdown.
31. Set the desired date range for the report.
32. Click Generate to finish.

[Screenshot: Generated report displayed with date range and report type selected]

33. To export the report, click the Export menu and select a format, such as PDF or Excel.

Expected Result

The report should display on screen within a few seconds, showing task and progress data for the selected date range. If exported, the file should download in the selected format.

Troubleshooting

Issue: Report generation is slow or appears stuck.

Cause: Large projects with a high number of tasks can take longer to process.

Fix: Wait a few moments before retrying. If the report still does not generate after a minute, refresh the page and try again.

Issue: Export button is greyed out.

Cause: The report has not finished generating yet.

Fix: Wait for the report to finish loading before attempting to export.

Issue: Exported file does not open correctly.

Cause: The selected export format may not be supported by the application used to open it.

Fix: Try opening the file in a different application, or export using a different format.

6. Dashboard Overview

Purpose

This section describes what the Dashboard shows and how it is used, rather than a specific procedure. The Dashboard is the default landing page after logging in, and gives an at-a-glance view of activity across all projects.

What the Dashboard Shows

- **Active Projects:** a list of all projects the user has access to, alongside their current status.
- **Upcoming Deadlines:** tasks and projects with due dates approaching, sorted by date.
- **Recent Activity:** a feed of recent changes across projects, such as new tasks, completed items, and comments.
- **Quick Actions:** shortcuts to commonly used actions, such as creating a new project or task.

Notes

The Dashboard's appearance can be changed using Dark Mode, which is available from Account Settings and applies across the Dashboard and all project views. Further, Dashboard data reflects near real-time activity, though brief sync delays of a few minutes can occasionally occur after changes are made elsewhere in the application.

7. Account Settings

Purpose

This section describes where users manage their profile, notification preferences, and appearance settings.

What Can Be Managed

- Profile: name, email address, and profile picture.
- Notifications: settings for email and in-app notifications, including task assignments and deadline reminders.
- Appearance: toggle for Dark Mode, which applies across the Dashboard and all project views.
- Password and Security: options to update password and manage login sessions.

Notes

Account Settings is accessed by clicking the profile icon in the top-right corner of the screen, followed by Settings. Changes made within Account Settings, such as enabling Dark Mode or adjusting notification preferences, apply immediately and do not require a separate save step unless otherwise indicated on the page.

Glossary

Admin: The highest permission level within a project, wherein the user can manage members, roles, and all project content.

Editor: A permission level that allows creating and editing projects, tasks, and reports, but not managing project members.

View-only: A permission level that allows viewing projects, tasks, and reports, without the ability to create or edit content.

Project Creator: A permission level that allows creating new projects, in addition to standard Editor permissions.

Workspace: The overall account environment containing all of a team's projects, members, and settings.

Dashboard: The default landing page after logging in, showing active projects, upcoming deadlines, and recent activity across the workspace.

Support and Contact Information

If an issue is not resolved using the Troubleshooting guidance provided in this manual, the following support channels are available:

- **Workspace Admin:** for account access, permissions, or workspace-level questions, contact your organization's ProjectHub Admin.
- **Support Team:** for technical issues not covered in this manual, contact support at support@projecthub.example.com.
- **Help Center:** for additional articles and updates, visit the ProjectHub Help Center from the profile menu within the application.

Note on Assumptions

This manual was created as an independent portfolio project, wherein no existing product was used as reference for platform, UI layout, or field names. Hence, the following assumptions were made based on how comparable project management tools typically handle these processes:

- ProjectHub is assumed to be a web-based application, accessed through a modern browser.
- Navigation is assumed to follow a common pattern: a left sidebar for primary sections (Projects, Dashboard), alongside a top-level navigation bar within each project (Tasks, Reports, Settings).
- Field names such as Project Name, Task Name, Assignee, and Due Date are assumed based on standard practice followed by similar platforms.
- Permission levels (Admin, Project Creator, Editor, View-only) are assumed to follow a typical role hierarchy, wherein higher roles inherit the permissions of lower ones.
- Exact sync behavior and notification delivery timing are assumed to involve brief delays under normal conditions, consistent with typical cloud-based applications.

Further, this manual is limited to the core workflows outlined in the Table of Contents. Advanced or administrative functions not covered by the original assignment scope, such as billing, workspace-level settings, or third-party integrations, have not been included.
